Launching September 2025 1-Year Full-Time Programme

The MSc in Biomedical and Clinical Research is a research-intensive programme that equips students with the skills to bridge the gap between scientific discovery and clinical application.

Programme Structure

Year-Long Research Project
(September–September)

Core Modules:

- Core Research Skills, Clinical Translation, Research Project and Dissertation

Specialised Learning Pathways

Students can customise their studies by selecting one or two optional modules aligned with their research interests:

- Advanced Skills module - for laboratory-based biomedical or clinical projects
- Clinical Trials module - for clinical/pre-clinical themed projects
- Statistics in Public Health and Medical Research, and Health Informatics - for health and informatics-related projects

**Ranked 4th in the UK
for Health &
Biomedical Sciences**
